Serverless

Quick History

A typical Client-Server

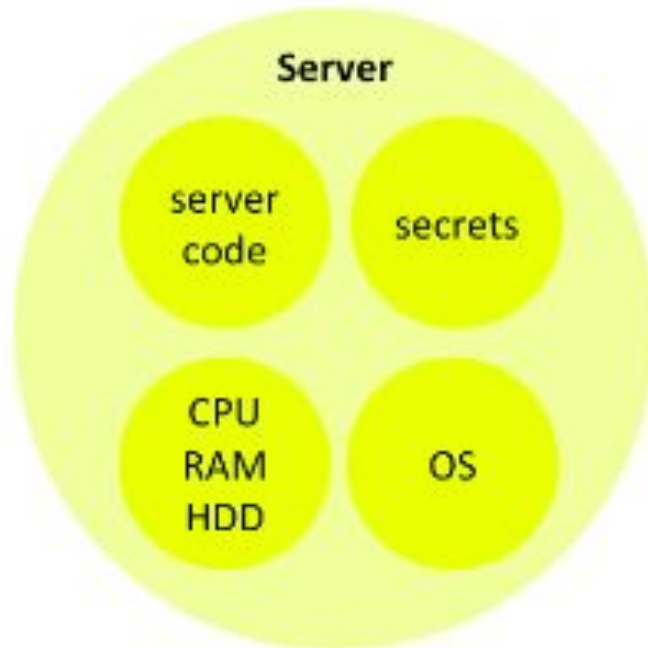

Why still C-S Architecture?

- **Technology evolution has changed its application**
- **Improved Hardware**
- **Lack of Trust**

“ We still need a trust boundary between client and server to control access to shared data or functionality. ”

Backend on Server

A Typical Backend

A Typical Server Room

Our Own Servers

Our Own Servers

Moved to **Cloud**

It's **someone else's** servers

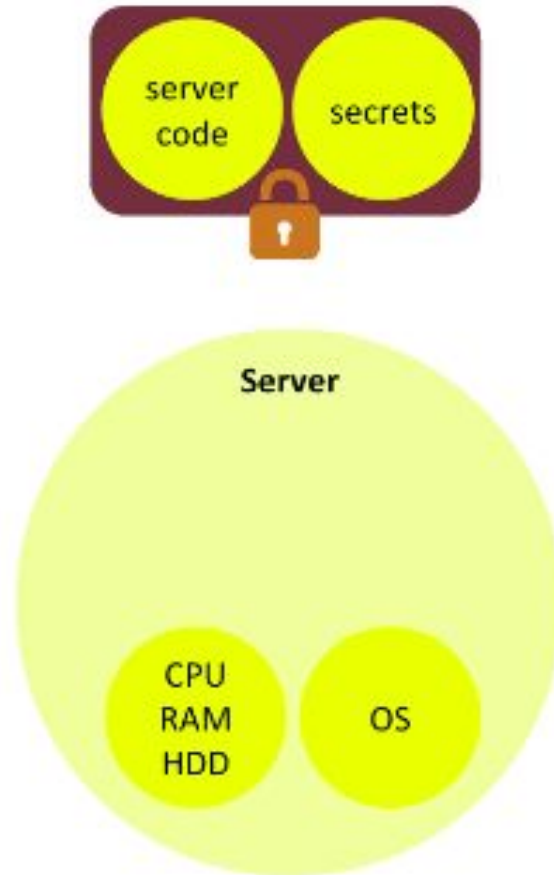

Serverless: someone else's servers

Autoscale + No Idle Costs
— Rob Mensching

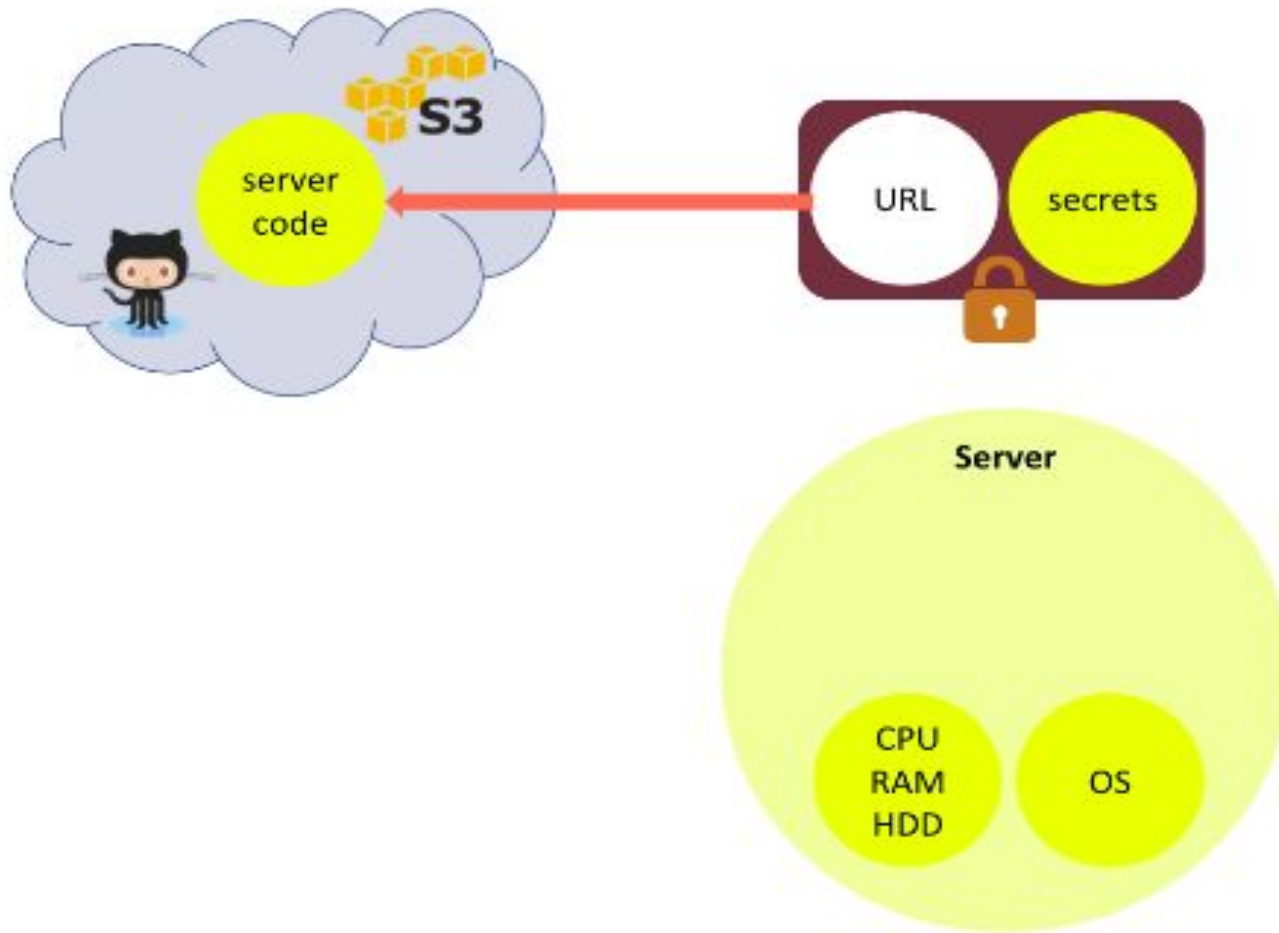

Examples

- **WebTask**
- **AWS Lambda**
- **Azure Functions**

From Backend to WebTask

From Backend to WebTask

WebTask

WebTask: Scenario

- **WebTask as a Code Sandbox**
- **WebTask as a Webhook**

How to start with WebTask?

Getting Started

1. Install WebTask CLI

```
npm install wt-cli -g
```

2. Init WebTask

```
wt init
```

3. Create hello.js and Deploy

```
echo "module.exports = function (cb) {cb(null, 'Hello');}" > hello.js  
wt create hello.js
```

Success WebTask and WebTask Editor

```
echo "module.exports = function (cb) {cb(null, 'Hello');}" > hello.js  
wt create hello.js
```

Congratulations! You have just created your first webtask: [https://sandbox.auth0-](https://sandbox.auth0-extend.com/api/run/wt-db97f712472e32f666e6a7bdea7614da-0/hello)

[extend.com/api/run/wt-db97f712472e32f666e6a7bdea7614da-0/hello](https://sandbox.auth0-extend.com/api/run/wt-db97f712472e32f666e6a7bdea7614da-0/hello)

Use Webtask Editor.

Try the web based Webtask Editor to quickly edit and test a webtask, manage secrets, crons, metadata and synchronize it with GitHub.

```
wt edit hello
```
